Eldorado National Forest
Caldor Fire Road Assessment Project (SA – ENF ES 01)
Engineering Services
Response to Questions
5/14/2024

1. The overview notes “provide environmental assessment services”. Are there specific biological or related assessments that are also required as part of the work?

   No.

2. The overview notes “the consultant will be expected to meet predetermined timelines for deliverables described”. Is further detail available on these timelines?

   Dates / timeline are associated with the percentage of phases for completion. Dates will be determined based on consultation with FS engineering.

3. Is this primarily rehabilitation of existing roads or are new roads proposed?

   Rehabilitation.

4. The Scope of work notes “Task Two: Field assessment. On-site inspection and survey of road segments “ – is this work envisioned to be a broad GPS-level survey or would supplemental aerial/drone/topographic mapping also be desired. What existing mapping may already be complete?

   Work is envisioned to be broad GPS-level survey to document existing and proposed new road features. However, contractor should describe their approach to complete road reconnaissance. In the event a major road failure is identified, FS should be informed promptly as those could need a topographic or other survey and require additional coordination. Lidar data is currently available and can be provided to contractor upon award.

5. Is there a project budget amount that you can share with prospective bidders?

   No.

6. Is there a page limit or other limitation or guidelines for the format of a response to this RFP?

   15 pages (not including Team bios / resumes
